

5W, AC/DC converter

FEATURES

- Ultra-wide 90 - 528VAC and 100 - 745VDC input voltage range
- Accepts AC and/or DC input (dual-use of same terminal)
- Working well with any two phases
- Operating ambient temperature range: -40°C to +85°C
- Compact size and high power density
- I/O isolation test voltage up to 4000VAC
- Used in electricity, instrumentation industries
- Output short circuit, over-current protection
- EN62368 safety approval

LS05-26BxxSS (-F) series is one of Mornsun's compact size power converters. It features ultra-wide input voltage, accepting both DC and AC input voltage, low power consumption, high efficiency, high reliability, reinforced isolation. The products meet IEC62368, UL62368, EN62368 standard and are widely used in industrial control instrumentation and electric power applications with the requirement for wide input voltage ranges, the need to meet CE safety certifications and lower demand for EMC compliance levels. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

Selection Guide

Certification	Part No.	Output Power	Nominal Output Voltage and Current(Vo/Io)	Efficiency at 230VAC (%) Typ.	Capacitive Load (μF) Max.
CE	LS05-26B03SS(-F)*	2.805W	3.3V/850mA	63	2200
	LS05-26B05SS(-F)	4.250W	5V/850mA	67	1500
	LS05-26B09SS(-F)	5.000W	9V/560mA	70	680
	LS05-26B12SS(-F)		12V/420mA	76	470
	LS05-26B15SS(-F)		15V/340mA	76	330
	LS05-26B24SS(-F)		24V/210mA	76	100

Note: *An "-F" suffix designates horizontal package vs. standard vertical mounting.

Product Characteristic Curve

Note: ① With an AC input between 90-110VAC/480-528VAC and a DC input between 100-155VDC/675-745VDC, the output power must be derated as per temperature derating curves; Please refer to typical application circuit;

② This product is suitable for applications using natural air cooling; for applications in closed environment please consult factory or one of our FAE.

- Note:
- For best results we recommended using identical electrolytic filter capacitors for C1 and C2 (brand, model, batch, etc.);
 - R1/R2: The maximum operation voltage of R1 and R2 should be above 450V. We recommend using several chip resistors in series to meet this type of operation voltage;
 - R3 refers to the winding resistance;
 - Output filter: We recommend using an electrolytic capacitor with high frequency, high ripple current and low ESR rating for C3 and C4 (refer to manufacture’s datasheet). Combined with L1, they form a pi-type filter circuit. Choose a Capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. The same type of margins should be chosen for L1 and L2 current ratings. C5, C6, C7, C8 is a ceramic capacitor, used to filtering high frequency noise. A suppressor diode (TVS) is a recommended to protect the application in case of a converter failure.

2. If the product is not operated within the required load range, the product performance cannot be guaranteed to comply with all parameters in the datasheet;
3. This part is open frame, at least 10mm safety distance between the primary and secondary external components of the module is needed to meet the safety requirement;
4. Unless otherwise specified, parameters in this datasheet were measured under the conditions of $T_a=25^{\circ}\text{C}$, humidity<75%, typical application circuit with nominal input voltage and rated output load;
5. In order to improve the efficiency at light load, there will be audible noise generated, but it does not affect product performance and reliability;
6. The module needs to be glued and fixed after assembly;
7. All index testing methods in this datasheet are based on our company corporate standards;
8. We can provide product customization service, please contact our technicians directly for specific information;
9. Products are related to laws and regulations: see "Features" and "EMC";
10. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
