CFM41S Series

Application Note V11 July 2019

1. Introduction

This application note describes the features and functions of Cincon's CFM41S series of open frame, switching AC-DC power module. These are highly efficient, reliable, compact, high power density, single output AC/DC power modules. The module is fully protected against short circuit and over-voltage conditions. Cincon's world class automated manufacturing methods, together with an extensive testing and qualification program, ensure that the CFM41S series power module is extremely reliable.

2. CFM41S Series Features

- Universal Input 90~264VAC
- EN55032 Class B and CISPR/FCC Class B
- IEC/EN/UL62368-1
- [Meets IEC/EN60335-1](#)
- Continuous Short Circuit Protection
- Over Voltage Protection
- No Load Input Power < 0.15W
- Peak Load (2 Times of Rated Current)
- Class II, 2"x2" Compact Size

Voltage interruptions	IEC 61000-4-11:2004, >95% 5000ms					Criterion B

CFM41S Series

Application Note V11 July 2019

5. Main Features and Functions

5.1 Operating Temperature Range

The highly efficient design of Cincon's CFM41S series power modules has resulted in their ability to operate within ambient temperature environments from -30°C to 80°C . Due consideration must be given to the de-rating curves when ascertaining the maximum power that can be drawn from the module. The maximum power which can be drawn is influenced by a number of factors, such as:

- Input voltage range
- Permissible Output load (per derating curve)

5.2 Output Protection

The power modules provide full continuous short-circuit protection. The unit will auto recover once the short circuit is removed. To provide protection in a fault condition, the unit is equipped with internal over-current protection. The unit will operate normally once the fault condition is removed.

5.3 Peak Load Function

CFM41SXXX and CFM41SXXX-E has a very powerful peak load function which can provide twice the rated power. However, the duration of the peak load should be less than 10 seconds, with a maximum 10% duty cycle and must externally add a 68uF/400V capacitor to BC+ & BC-, but this is not needed when input is exceed to 200Vac.

Vin= 90Vac&115Vac&230Vac&264Vac
Peak Load Function by 200% Load 10S & 80% Load 90S

CH1: Vin, CH2: Vout, CH4:Iout

Average Power: 36.87W

Add External 68uF/400V Capacitor to BC &+ BC-.

Vin=230Vac&264Vac

Peak Load Function by 200% Load 10S & 80% Load 90S

CH1: Vin CH2:Vout CH4:Iout

Average Power: 36.87W

6. EMC & Safety

■ Emission and Immunity

EN55032 Class B, EN61000-3-2:2014, EN61000-3-3:2013, EN61000-6-3:2012, EN61000-6-4:2011, 47 CFR FCC Part 15 Subpart B (Class B), Oct.2014, EN55024, EN61204-3:2000, EN61000-6-1:2007, EN61000-6-2:2005

■ Safety

Class II, IEC/EN/UL62368-1

7.2 Power De-Rating Curve

7.2.1 CFM41SXXX、CFM41SXXX-E

7.2.2 CFM41SXXX-T

CFM41S Series

Application Note V11 July 2019

7.3 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown in Figure 1. When testing the Cincon's CFM41S series under any transient conditions, please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate the

- Efficiency
- Load regulation and line regulation.

The value of efficiency is defined as:

Where:

V_o is output voltage

I_o is output current

P_{in} is input power

The value of load regulation is defined as:

Where:

V_{FL} is the output voltage at full load

V_{NL} is the output voltage at 10% load

The value of line regulation is defined as:

$$\text{Line reg.} = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where:

V_{HL} is the output voltage of maximum input voltage at full load.

V_{LL} is the output voltage of minimum input voltage at full load.

Figure 1. CFM41S Series Test Setup

7.4 Output Ripple and Noise Measurement

The test set-up for noise and ripple measurements is shown in Figure 2 Measured method:

Add a 0.1 uF ceramic capacitor and a 10 uF electrolytic capacitor to output at 20 MHz Band Width. (CFM41S050: Add a 0.1uF ceramic capacitor and a 47uF aluminum electrolytic capacitor to output.)

Figure 2. Output Voltage Ripple and Noise Measurement Set-Up

7.5 Installation Instruction

The CFM41SXXX-T has four 3.5mm diameter mounting holes. Please use the mounting holes as follows: Insert the spacer (6mm diameter max.) of 8mm height or more to mount the unit. The vibration specification applies when the unit is mounted on 8mm spacers. Please allow 4mm side clearance from the components and all side of the PCB. Allow 5mm clearance above the highest parts on the PCB. Be especially careful to allow 8mm between the solder side of the PCB and the mounting surface. If the clearances are not sufficient, the specifications for isolation and withstand will not be valid.

The CFM41SXXX and CFM41SXXX-E mounting holes are 1.5mm. Please allow 4mm side clearance from the components and all side of the PCB and CASE. Allow 5mm clearance above the highest parts on the PCB and CASE.

CFM41S Series

Application Note V11 July 2019

7.6 Class I EMI Solution

The CFM41S series need additional inductance and YCap to meet EN55032 CLASS B when test condition is Class I. If customers use in Class II systems, please ignore this section.

CFM41SXXX

CFM41SXXX-E

CFM41SXXX-T

Additional Inductance related parameters:

Specification	Inductance	Duplex Winding /turns	Manufacturers
