

ARTESYN MODULAR HIGH POWER SYSTEM

Up to 24000 Watts

iHP12

iHP24

Designed for a wide range of medical, industrial, lighting/ horticulture and semiconductor applications, Advanced Energy's iHP configurable precision power system provides accuracy, resolution and stability as either a programmable voltage or current source. It provides up to 24 kW in 3 kW increments and can be configured for up to 8 outputs using a wide variety of plug-in modules that address a large range of voltages and currents.

Safety approvals secured by Advanced Energy eliminate the need for an isolation transformer in medical equipment. The iHP power system also has industrial safety approvals, including compliance to the SEMI F47 standard for semiconductor processing equipment.

The iHP power system offers developers either an analog or digital interface to their system supporting standard communications protocols, while a software graphical user interface (GUI) allows for easy configuration and user dashboard creation. For horticulture customers, detailed scheduling and control software is available. For non-medical applications, a smaller and lighter rack is now available using the same plug-in modules.

MODEL NUMBER SHORTCUT

For repeated like modules in parallel or series, instead of listing all the same modules separated by a “-”, you can simply list the module once and then follow by the number of times it repeats enclosed in parenthesis.

For example:

iHP24H3A-SW-SW-SW-SW-SW-SW-S8-S8-00

would become:

iHP24H3A-SW(6)-S8(2)-00
